

Between 0 and 1

Feel-the-Model(TM)

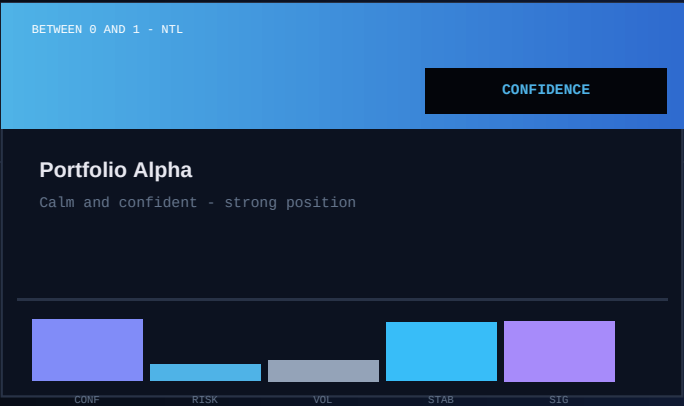

Neuroaesthetic AI Infrastructure

*The translation layer between AI's math
and the human nervous system.*

- Pre-Seed
- Enterprise AI
- Neuroaesthetics
- FinTech

The NTL Mapping

Confidence	--> Color Saturation
Risk Score	--> Hue (blue --> red)
Volatility	--> Blur / Softness
Stability	--> Gradient Symmetry
Signal Str	--> Brightness

AI speaks math. Humans feel gradients.

Dashboard Fatigue

72% of executives cite information overload as the #1 barrier to AI adoption. Dashboards full of numbers create cognitive paralysis.

Explainability != Interpretability

XAI tells you what the model did. No product tells your nervous system how to feel about it. Those are different problems.

Misaligned Trust

Binary AI outputs hide confidence gradients. Users either over-trust or under-trust - rarely calibrate correctly.

The Core Gap

AI computes in 0s and 1s. Human perception operates in gradients - color, warmth, tension, clarity. Nobody bridges this.

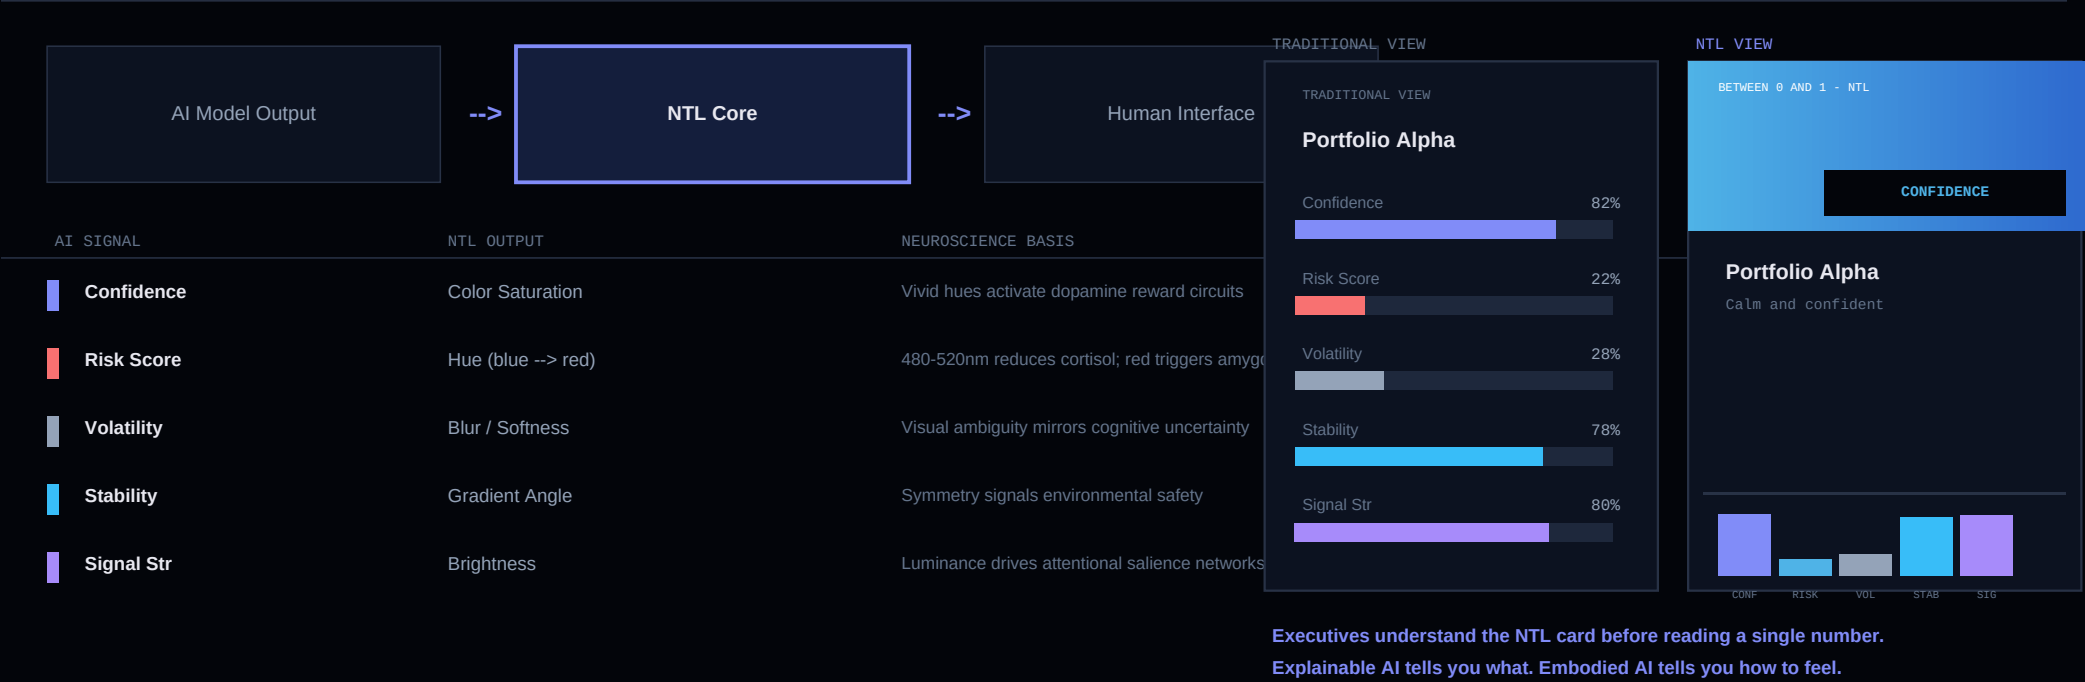

72%

of executives report dashboard overload as their #1 AI adoption barrier

Neuroaesthetic Translation Layer

Middleware that converts AI model outputs into neurologically calibrated visual experiences - AI-agnostic, domain-agnostic, plug-in.

Working. Live. Collecting data today.

Single Asset

Real-time NTL card from 5 sliders.
Instant visual feedback.

Live Market Data

Type any ticker. yfinance pulls 3 months
of data. NTL renders live.

Portfolio View

CSV upload. Portfolio mood banner
+ per-asset neuroaesthetic grid.

A/B Demo Engine

NTL vs Traditional, side by side.
Collects preference data live.

Traction

MVP Live

Working app on localhost + GitHub

Real Data

yfinance integration - live market NTL

A/B Running

Preference data collected each session

6 Experiments

Full validation study design complete

12-Month Roadmap

Q3 2026

Biometric validation
N=150, HRV + eye tracking

Q4 2026

NTL API beta
3 enterprise pilot partnerships

Q1 2027

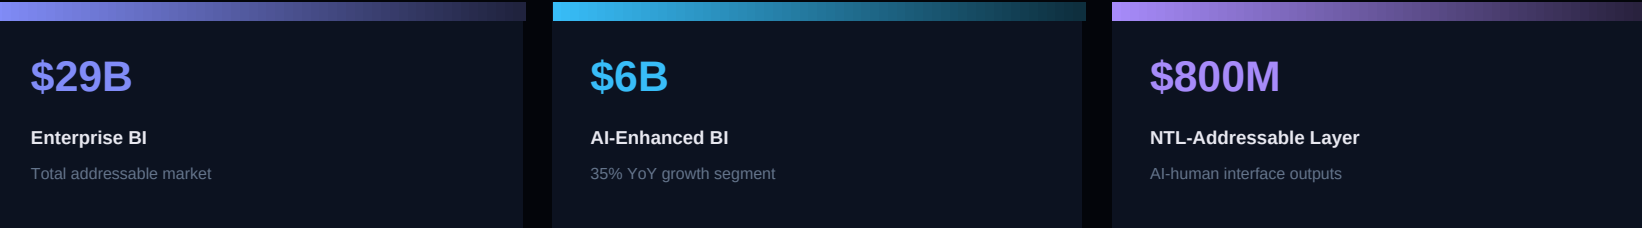

Platform launch
White-label SDK + neural profiles

Q2 2027

Standard push
NTL as industry content standard

Infrastructure for the human layer of AI.

Market Size

Revenue Model

CHANNEL	PRICE	CUSTOMER	ARR POTENTIAL
API per 1K calls	\$0.10 / 1K	Developers	\$100K at 1M daily calls
Enterprise SDK	\$10-50K / yr	Finance, Healthcare	\$750K at 30 customers
White-label NTL	\$100K+	BI Platforms	\$500K at 5 deals
Neural Profile Sub	\$9.99 / mo	Consumers	Data flywheel asset

Defensible Moat

- Proprietary neuroaesthetic mappings (validated, not guessed)
- Biometric validation dataset - impossible to replicate without stolen data
- Neural profile dataset - personalization flywheel, grows with users
- Domain agnostic architecture - works with any model, any domain

Built by someone who felt the problem every day.
